1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoRY sites of the pcWVSPORT 6 vector. Library
was not normalized. Library was constructed by Life Technologies, a
division of Invitrogen.
This sequence belongs to sequence cluster 7663.f

This sequence belongs to sequence cluster 7663.f

let strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           For more information about this cluster, see http://www.genoscope.cns.fr/cdna?s=CSODIO51BH10QP1&c=7663.f. 1st strand cDNA was primed with a NotI-Oligo(dT) primer. Five prime
1st strand cDNA was grimed with a NotI-Oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
was not normalized. Library was constructed by Life Technologies, a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AL540775 Homo sapiens PLACENTA Homo sapiens 3-PRIME, mRNA sequence.

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the PCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Н
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Unpublished (2001)

1st strand cDNA was primed with a NotI-Oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
was not normalized. Library was constructed by Life Technologies, a

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The porK polynucleotides and protein may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate porK expression, such as lung and kidney tumours, leukemia and stomach adenocarcinoma. porK may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of porK by expressing inactive proteins or to supplement the patients own production of porK. The encoded porK may be used as an antigen in the production of antibodies against porK and in assays to identify modulators of porK expression and activity. The anti-porK antibodies and antagonists may be used to down regulate expression and activity and as diagnostic agents for detecting the presence of porK in samples. The present sequence represents a cDNA encoding the human porK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 2674 BP;

                                                             문
                                                                                        S
                                                                                                                                                                                                                  The invention relates to a newly isolated peptide sequence of a human CC kinase that is related to the proto-oncogene tyrosine kinase subfamily. CC The activity of the kinase of the invention may be described as, CC cytostatic, antiarteriosclerotic, antiinflammatory and antipsoriatic. CC Peptides of the invention are useful in assays to determine the CC biological activity of the protein, in drug screening assays, tissue CC diagnosing disorders characterised by an absence of, inappropriate, or CC diagnosing disorders characterised by an absence of, inappropriate, or CC unwanted expression of the protein, such as inflammation, cancer (e.g. CC leukaemia, lung tumours, kidney tumours or stomach adenocarcinoma), CC arteriosclerosis, and psoriasis. Nucleic acid molecules of the invention CC assays. The peptide and nucleic acid sequences are useful as models for the development of human therapeutic targets, aid in the identification of therapeutic proteins and serve as targets for the development of human therapeutic targets, aid in the identification CC tissues that express the protein. The protein of the invention may also be useful in gene therapy. The gene encoding the protein may also be useful in gene therapy. The gene encoding the protein of the invention CC has been localised to human chromosome 15. The current sequence

```
The invention relates to a novel isolated polypeptide which is a human CC kinase and phosphatase (KPP). The polypeptide of the invention CC demonstrates cardiovascular, antiarterioscierotic, hypotensive, CC vasotropic, antianflammatory, antianginal, anti-HIV, antiallergic, CC antialsthmatic, immunosuppressive, antithyroid, dermatological, neuroprotective, antiatheritic, ophthalmological, antiparasitic, antiparasitic, antiparasitic, ophthalmological, antiparasitic, an

                                                                                                                                                                                         The present invention relates to the isolation of human polynucleotide sequences that are differentially expressed during foam cell differentiation. The polynucleotide sequences of the invention or a composition comprising these polynucleotides are useful as a high throughput method for detecting altered expression of one or more polynucleotides in a sample. The polynucleotides can be used in the diagnosis of disorders associated with foam cell development such as atheroselerosis, cerebral stroke, and cardiovascular disorders such as atheroselerosis, cerebral stroke, and cardiovascular disorders such as atheroselerosis. The polynucleotides sequences can also be used PCR primers and probes. The polynucleotides of the invention are also useful in gene therapy. As394746-AAS95021 represent the human polynucleotide sequences of the invention which are differentially expressed during foam cell differentiation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Shiffman
Tai J;
                                                                                                                                                                                                                                                                                                                                                                                                                           Composition useful for diagnosis of conditions, disorders or diseases associated with atherosclerosis, comprises several polynucleotides th are differentially expressed in foam cell development.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; foam cell differentiation; atherosclerosis; cerebral stroke; cardiovascular disorder; coronary artery disease; gene therapy; ds.

                                                                                                                                                                                                                                                              S
                                                                                                                                                                                                                                                                                                                                                                                                                   CC invention have cytostatic, antiarreriosclerotic, anticonvulent, conotropic, neuroprotective, cerebroprotective, anti-HTV, antiallargic, conotropic, neuroprotective, cerebroprotective, anti-HTV, antiallargic, cantiinflammatory and thyromimetic activities, and can be used in gene charapy. The human KPP proteins and polynucleotides can be used in continuous can be used in considered the decreased expression or overexpression of KPP, such as cell conferrative (e.g. cancer, atherosclerosis), neurological (e.g. AIDS, concer, atherosclerosis), neurological (e.g. AIDS, concer, atherosclerosis), neurological (e.g. AIDS, contents), and developmental (e.g. Hypothyroidism, Cushing's syndrome) conference of infections. They can also be used in assessing the effects of exogenous compounds on the expression of nucleic acid and amino acid compounds for effectiveness as agonist or antagonist of the polypeptides, cor in altering the expression of the target polynucleotide and compounds that specifically bind to or modulate the activity of the polypeptide.
                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a method for inducing neutralisation of cells or tissues by using a protein binding to CRAM (collapsing-response mediator protein-associated molecule) protein or its encoded gene. The proteins and their encoded genes are useful in gene therapy and regenerative medicine, e.g. by inducing neutralisation of mitochondria. They are also applicable in diagnosis, drug development for neural diseases and studying the mechanism of pathosis. The current sequence represents CRAM protein related cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Genes and proteins participating in neutralization of cells or tissues, useful in gene therapy and regeneration medicine, applicable in discousies, drug development for neural diseases and study of mechanism

                      The fur gene, encoding furin, is in the human and cat genomes directly upstream of this fes/fps proto-oncogene sequence. Furin is strongly expressed in specific types of tunours and labelled RNA or DNA probes of the fur gene and antibodies against furin can be used for diagnostic purposes. (See also AAN70061-62 and AAP70056). (Updated on 25-MAR-2003 to correct PA field.) (Updated on 27-AUG-2003 to correct OS field.)
                                                                                                                                 Recombinant DNA contg. the fur gene - used for producing furin protand antibodies and as a diagnostic aid in the detection of tumours.

Also disclosed is an isolated polynucleotide encoding (I), a recombinant vector comprising the polynucleotide and a gene therapeutic agent comprising the recombinant vector as an active ingredient. The proteins, genes, agents and methods are useful for preventing and treating a cartilage disease, e.g. osteoarthritis, cartilage defect, or rheumatoid arthritis. The current sequence represents a human gene of the invention encoding a protein that promoters are accounted to the protein that promoters are accounted to the protein that promoters are accounted to the protein that promoters are presents a human gene of the invention encoding a protein that promoters are presents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New purified protein that promotes type II collagen expression, useful for preventing and treating a cartilage disease, e.g. osteoarthritis, cartilage defect, or rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Homo

cc significant portion of the canine genome. The isolated canine nucleic carid sequences of the invention may be useful for drug screening and coxicity assays. The invention is therefore useful for assessing the cimpact, including toxicity, of a compound; pharmaceutical agent or cell impact, including toxicity, of a compound; pharmaceutical agent or cell useful for detecting genes that are up- or down-regulated in canines in a ccl disease state. The sequences are useful as diagnostic agents or markers created to detect a cellular response in a sample individually or as part of a gene expression profile. It is also useful as target for agents that cell gene expression or activity. The database is useful for conducing electronic Northerns that allow the user to determine the cell type or tissue in which a given gene is expressed and to allow cell type or tissue or cell. The methods are useful for determining the similarity of a toxic response to one or more individual compounds. The similarity of a toxic response to one or more individual compounds. The cell itself hood that a compound or test agent will induce various specific pathologies such as those of the liver (liver necrosis, fatty liver cell broads are useful for mation or hepatitis), those of the kidney, the potential cellular pathways influenced, induced with at least one of the toxins. The methods are also useful for predicting or elucidating the compound or test agent due to the similarity of the expression profile compared to the profile induced by a known toxin. The present sequence is that of a canine DNA sequence which was claimed for use during the correduction of a canine microarray of the heating the during the
                                                             production of a canine microarray of the invention.

CC DNA chip analysis as given in the specification, and comparing the capression level to an expression level in an unactivated GC, where CC differential expression of Gs is indicative of GcA. Also included are CC differential expression of Gs is indicative of GcA. Also included are CC expression of at least one gene in Gs; (2) screening (M3) for an agent chart alters the CC expression of at least one gene in Gs; (2) screening (M3) for an agent classe, an allergic response in a subject, exposure of a subject tissue, an allergic response in a subject, exposure of a subject to a profile; (3) detecting (M4) an inflammation (especially chronic) in a CC pathogen or sterile inflammatory disease, by detecting the level of comparison of the gene is indicative of inflammation; (4) treating CC exposures on of the gene is indicative of inflammation; (4) treating CC exposures in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by detecting the level of expression of the gene is indicative of inflammation; (4) treating CC exposure of a subject, exposure of a subject to a pathogen or sterile inflammation of the expression of gene(s) from Gs in the tissue. M1 is useful for detecting GCA; M3 is useful for modulating GA; M3 is useful CC exposure of a subject to a pathogen or sterile inflammation with an inflammatory disease (e.g. cardiac reperfusion injury, renal reperfusion injury, ARDS, adult CC exposure of a subject to a pathogen or sterile inflammatory disease (e.g. cardiac reperfusion inflection, parasitic infection, protozoal infection, con pathogen infection, protozoal infection, con pathogen infection, trial infection, parasitic infection, protozoal infection, con pathogen in a gene captured and specification. But was obtained in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention provides isolated nucleic acid sequences encoding a proto-
oncogene tyrosine kinase (poTK). The poTK polynucleotides and protein may
be used in the prevention, diagnosis and treatment of diseases associated
with inappropriate poTK expression, such as lung and kidney tumours,
leukemia and stomach adenocarcinoma. poTK may be used to treat disorders
associated with decreased expression by rectifying mutations or deletions
in a patient's genome that affect the activity of poTK by expressing
inactive proteins or to supplement the patients own production of poTK.
The encoded poTK may be used as an antigen in the production of
antibodies against poTK and in assays to identify modulators of poTK
expression and activity. The anti-poTK antibodies and antagonists may be
used to down regulate expression and activity and as diagnostic agents
for detecting the presence of poTK in samples. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    exon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acids encoding a proto-oncogene tyrosine kinase, useful for the prevention, diagnosis and treatment of e.g. leukemia and lung tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 15297 BP; 3267 A; 4306 C; 4478 G; 3246 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a newly isolated peptide sequence of a human CK kinase that is related to the proto-oncogene tyrosine kinase subfamily. The activity of the kinase of the invention may be described as, compared to the proto-oncogene tyrosine kinase subfamily. The activity of the kinase of the invention may be described as, compared to the invention are useful in assays to determine the compared to the invention are useful in assays to determine the compared to the invention are useful in drug screening assays, tissue compared to the invention are useful in treating or disorders characterised by an absence of, inappropriate, or compared to the protein, such as inflammation, cancer (e.g. compared to the protein, such as inflammation, cancer (e.g. compared to the protein, such as inflammation, cancer (e.g. compared to the protein, such as inflammation, cancer (e.g. compared to the protein, such as inflammation, cancer (e.g. compared to the protein and molecules of the invention as models for the development of human therapeutic targets, and in the identification compared to the protein and serve as targets for the development of human characteristic for the invention may also be useful in gene therapy. The gene encoding the protein of the invention compared to human characteristic may also be useful as the human characteristic may also be useful as the human characteristic may also be useful to human characteristic may also be useful as the human characteristic may be useful as the human characteristic may be useful as a new part of the human characteristic ma
